Ford 429/460 Engines Jim Smart 2021-12-20 Learn to make incredible horsepower from Ford's most powerful big-block engine design. For years, Ford relied on the venerable FE big-

block engine design to power its passenger cars, trucks, and even muscle cars—and why not? The design was rugged, reliable, amortized, and a proven race winner at Le Mans and drag strips across the country. However, as is always the case with technology, time marches on, and Ford had a new design with many improvements in mind. Enter the 385 family of engines (also known as the “Lima” big-block). Produced from 1968–1998, the 385-series engines were used in multiple applications from industrial trucks to muscle cars and luxury cruisers. In *Ford 429/460 Engines: How to Build Max Performance*, which was written by Ford expert Jim Smart, all aspects of performance building are covered, including engine history and design, induction systems, cylinder heads, the valvetrain, camshaft selection, the engine block, and rotating assemblies. The best options, optimal parts matching, aftermarket versus factory parts, budget levels, and build levels are also examined. The 429/460 engines are a good platform for stroking, so that is covered here as well. Whether you want to build a torque-monster engine for your off-road F-150, a better-performing version of a 1970s-era smog motor for your luxury Lincoln, or an all-out high-horsepower mill for your muscle

car, this book is a welcome addition to your performance library.

Aluminum in America Quentin R.

Skrabec 2017-02-06 The history of aluminum: metallurgy, engineering, global business and politics—and the advance of civilization itself. The earth's most abundant metal, aluminum remained largely inaccessible until after the Industrial Revolution. A precious commodity in 1850s, it later became a strategic resource: while

steel won World War I, aluminum won World War II. A generation later, it would make space travel possible and the 1972 Pioneer spacecraft would carry a message from mankind to extraterrestrial life, engraved on an aluminum plate. Today aluminum, along with oil, is the natural resource driving geopolitics, and China has taken the lead in manufacture.
